Dear Hiring Manager,

I am writing to express my interest in opportunities that align with my background in software engineering, system development, and full-stick technologies. I recently graduated with a Bachelor's Degree in Software Engineering from Universiti Tun Hussein Onn Malaysia (UTHM), earning a CGPA of 3.66 and being recognized on the Dean's List for four semesters.

Throughout my academic journey and internship experiences, I have consistently demonstrated the ability to develop practical solutions to real-world problems. During my internship at **Jabil Circuit Sdn. Bhd.**, I built a centralized internal platform for the Industrial Engineering department called the **IE Portal System**. It streamlined project tracking and team communication through features like Gantt chart visualization, CT% and Completion% dashboards, and secure authentication using JWT. One of my key responsibilities was **automating manual data collection processes, computing performance KPIs, and transforming the data into real-time charts** to support decision-making and improve project visibility across departments.

In addition, I independently developed and published **Whiskit.co**, a mobile ordering system for a custom bakery business, as part of my final year project. Built using **React Native, Firebase, and Stripe**, the app enabled real-time order processing, role-based access (Customer, Staff, Admin), and secure in-app payments. It was featured in the AITCS Journal and reduced order handling errors by 70%.

Earlier, during my diploma, I created a **Pet Tracking System Using IoT**, a GPS-based web dashboard that allowed pet owners to monitor live location using ESP8266 and Neo-6M GPS modules integrated with Firebase and PHP.

I am currently enhancing my development skills by building my own **portfolio website** using **Next.js, TypeScript, and Tailwind CSS**, where I showcase my projects, skills, and learning journey.

I am highly motivated to contribute to real-world projects and continue learning in a collaborative environment. I bring not just technical skills, but a proactive attitude and proven ability to deliver end-to-end solutions from frontend UI to backend logic and database integration.

Thank you for taking the time to review my application. I look forward to any opportunity to further discuss how I can contribute to your team's success.

Warm regards,
Sutanth A/L Kunsuraman
